Thank you for the opportunity and please feel free to reach out at any time.

Workday Comments on CCPA Updates, Cybersecurity Audits, Risk Assessments, Automated Decisionmaking Technology (ADMT), and Insurance Companies

February 19, 2025

Workday appreciates the opportunity to comment on the California Privacy Protection Agency's proposed rulemaking regarding cybersecurity audits, risk assessments, and automated decisionmaking technology (ADMT). Workday is a leading enterprise platform that helps organizations manage their most important assets – their people and money. The Workday platform is built with AI at the core to help customers elevate people, supercharge work, and move their business forever forward. Workday is used by more than 10,500 organizations around the world and across industries – from medium-sized businesses to more than 60% of the Fortune 500.

We previously submitted comments on the proposed rulemaking under the CPRA in November 2021, the CPPA's provisions on service providers in August 2022, and the initial proposed rulemaking for cybersecurity audits, risk assessments, and automated decision-making draft regulations in March 2023. We look forward to working with the Agency as it continues developing rules under the CPRA.

Please do not hesitate to contact Barbara Cosgrove, Chief Privacy and Digital Trust Officer at barbara.cosgrove@workday.com if you have any questions or would like further information.

Scope of Proposed Regulations

The agency's proposed regulations establish rules that cover bias, explainability, and model training, and create new opt-out rights. Respectfully, we note that several stakeholders have raised that the breadth of these regulations may exceed the Agency's statutory authority to make rules clarifying the CCPA's "access and opt-out rights" for ADMT.

The California Legislature is still actively considering legislation that would regulate the use of AI. One of the measures introduced this session would establish a comprehensive regulatory scheme that would, at least, directly overlap with the Agency's proposed rules. Given the question of the agency's authority, the complexity of these issues, the potential for future conflicting legislation, and the need for harmonization with other regulatory efforts, we urge that the agency consider limiting its rulemaking until the Legislature can settle these questions.

Cybersecurity Audits

Recommendation 1: Streamline reporting and oversight requirements.

We recommend removing requirements in §7122(i) for reporting to, obtaining signatures from, and presenting audits to the board/governing body, and replacing this requirement with an obligation to involve

the senior-most executive in the business who is responsible for oversight of cybersecurity governance. Requiring this level of board involvement for a specific cybersecurity audit is generally unnecessary and potentially creates an undue burden on boards and organizations. Organizations should have the flexibility to determine the appropriate internal accountability structure and designate who has access to audits and their results. This allows for a more tailored and effective approach to oversight.

Recommendation 2: Clarify the scope of cybersecurity audits.

The CPPA should revise the cybersecurity audit regulations to recognize that cybersecurity programs need the flexibility to be risk based and the ability to evolve to address future cybersecurity risks. Setting forth prescriptive requirements components rather than pointing to existing globally respected industry security standards, such as the NIST Cybersecurity Standard or ISO 27001, may cause businesses to redirect resources from proactively preventing new cyber threats. It's also important to note that a cybersecurity program potentially requires organizations to use a combination of controls rather than a single control. This is particularly important for broad components like "zero-trust architecture," which encompass various aspects implemented across multiple individual controls.

In addition, we recommend amending or removing § 7123(b)(4), which allows for an open-ended audit scope. This creates ambiguity and makes audits difficult to manage. Instead, the audit scope should be clearly defined and agreed upon by the organization and the auditor through a pre-established audit plan in line with best practices for cybersecurity and privacy auditing. This ensures that audits are focused and relevant.

Risk Assessments

Recommendation 1: Narrow the scope of ADMT risk assessments.

Workday supports the use of impact and risk assessments for AI technologies. When scoped appropriately, they are useful internal tools that help organizations assess risk and identify mitigating measures. However, the focus on training ADMT that is" capable of certain uses" in § 7150(b)(4) is overly broad, and disconnected from the actual risks of the training process itself. The current risk assessment trigger will likely lead to an unmanageable number of risk assessments and capture information that is not useful for businesses or the Agency. Instead, we recommend adopting an approach focusing on processing activities that present a high risk to individual rights, considering the nature, scope, context, and purposes of the processing.

Recommendation 2: Clarify service provider and developer responsibilities with respect to risk assessments and audits.

In § 7050(h), we recommend clarifying the roles with respect to service providers. Requiring "all facts" to be provided is an onerous and open-ended obligation on service providers, which is out of step with best practices. It will require them to spend time and resources gathering information that the recipient-business may already have in its possession. To the extent the business requires information from external sources to complete their audits or risk assessments, we recommend requiring that service providers must assist businesses in fulfilling their legal obligations, considering the nature of the processing and the information available to the service provider. This obligation would align with other global regulations, such as the GDPR.

We also recommend that § 7153(a) be revised to align with this approach. § 7153(a) requires businesses to provide to a recipient-business all facts necessary to conduct its assessment. Instead of requiring developers to provide "all" facts, we recommend that the language be revised to read that when a business

makes ADMT or AI available for processing activities under § 7150(b), developers are required to provide necessary information and assistance to the recipient-business, taking into account the technology's nature and the information available to the service provider.

Recommendation 3: Revise the annual submission frequency of risk assessments to be a consultation when a residual high risk remains that can not be mitigated, as well as a submission upon request.

Requiring annual submissions of risk assessments will lead to an overwhelming number of submissions, meaning the Agency will not be able to ascertain which truly pose a high risk to consumers. We recommend shifting the requirement from annual submissions to 1) consultations when a residual high risk to individual rights remains that can not be mitigated; and 2) submissions upon request. Annual submissions are a significant departure from global norms without a clear benefit to consumers. This change will allow for a more targeted and efficient use of resources by businesses and the Agency.

Automated Decisionmaking Technology (ADMT)

Recommendation 1: Clarify key terms and definitions.

Firstly, we appreciate the use of the term "substantially facilitate" in the definition of ADMT in § 7001(f), as the level of influence an AI output has on a decision is a crucial factor in classifying AI as high risk. However, we recommend clarifying the following terms in § 7001(f)(2):

- "key factor" and "primary factor": We would recommend providing definitions, as well as specific
 examples to illustrate the application and meaning of the terms "key factor" and "primary factor" in
 the context of AI risk classification. An alternative would be to use the terms "principal basis" or
 "controlling factor."
- "significant decision": In §7200(a)(1), we recommend limiting the definition of "significant decision" to the provision or denial of a service, benefit, or opportunity, as "access to" is likely to capture a wide swath of lower risk applications that are not determinative in making a "significant decision."

Recommendation 2: Narrow or remove the training ADMT trigger.

Training automated decision-making tools (ADMTs) should not be covered by the proposed regulations. Model training does not constitute automated decision-making as defined by the statute, as it does not involve decisions impacting individual consumers. Specifically, we recommend removing the inclusion of training uses of ADMT as a "use of automated decisionmaking technology" in § 7200(a)(3) of the Regulations. This inclusion is inconsistent with the definition of automated decisionmaking technology in § 7001(f), as training ADMT does not "execute a decision, replace human decisionmaking, or substantially facilitate human decisionmaking" in a way that impacts consumer privacy and security.

In addition, training ADMTs also does not pose the same direct consumer risks associated with the processing of personal information for decision-making. Risks of consumer harm arise from the use of ADMTs to make decisions about them with little or no human intervention, not from the training process itself. Any residual privacy risks present in the training process are sufficiently addressed by existing frameworks. Instead, we recommend focusing ADMT requirements on the use of ADMT with respect to consumers.

We also note that clarity is needed around the framing of "training ADMT" vs "training uses of ADMT." As an example, businesses (deployers) are generally not using ADMT solely for training purposes. However, it

seems as though training could capture a business (deployer) using ADMT that continues to learn on the business's own data. Other leading AI frameworks generally do not consider this type of learning as training.

February 19, 2025

California Privacy Protection Agency 915 Capitol Mall, Suite 350A Sacramento, CA 95814

Dear California Privacy Protection Agency,

ZoomInfo is a software and data company that provides information for business-to-business sales, recruiting, and marketing. We support consumer privacy rights and believe that, in large part due to the work of this Agency, we are on the path to developing a healthy privacy framework for the State of California (and beyond).

We are grateful for the opportunity to submit the following comments as part of the rulemaking process for the California Consumer Privacy Act (CCPA):

1. Automated Decision Making Tool Definition

We believe the 'Automated decisionmaking technology' (ADMT) definition requires additional clarification. The current definition states that ADMT must either replace or "substantially facilitate human decision making." "Substantially facilitate" means using the technology's output as a "key factor" in decision making. We would respectfully ask that the Agency further clarify this definition to help minimize differing or inconsistent interpretations and to align with established causation analyses.

Specifically, we recommend that the Agency further clarify the definition of ADMT to align with existing California jurisprudence¹ by amending the ADMT definition to read: "must either replace or substantially facilitate constitute <u>a substantial factor</u> in human decision making."

Under the proposed language, an ADMT would be a "substantial factor" only when the human decision-maker would not have made a decision on grounds independent of the ADMT's output. Consider a company's employee promotion system where an ADMT analyzes historical performance data and flags employees for potential promotion. If a manager relies entirely on the ADMT's recommendation, or only verifies basic eligibility (e.g., whether the employee is full-time and not on leave), the ADMT is a substantial factor since employment status alone cannot justify a

¹ Courts in California use a "substantial factor" analysis in determining protected class and discrimination cases (e.g., whether someone's protected speech was a "substantial factor" in their employer's decision to demote them). Ultimately, courts seek to determine if a decision would have been made absent the protected activity/characteristic (*Soranno's Gasco, Inc. v. Morgan*, 874 F.2d 1310 (9th Cir. 1989)).

promotion. However, if the manager conducts their own comprehensive evaluation - reviewing performance metrics, conducting interviews, and checking references - alongside the ADMT's recommendation, the ADMT is not a substantial factor since the manager relied on adequate independent evidence to support their decision.

The proposed change would align the regulations with existing state and federal jurisprudence, where courts have developed a framework for the substantial factor analysis. Applying the "substantial factor" test, as opposed to novel (but potentially related) concepts like "substantial facilitation" and "key factor," would help businesses understand and comply with the regulations, and would aid courts in applying regulations consistently.

2. Significant Decision Making

The rules appropriately establish heightened requirements for "significant decisions." The current definition of a "significant decision" covers decisions "using information...that results in **access to**, or the provision or denial of...employment or independent contracting opportunities/compensation, specifically: hiring." Instead, we recommend the language be amended to read: "'Significant decision' means a decision...that results in access to **selection for**, or the provision or denial of...employment or independent contracting opportunities or compensation."

The term "access to" employment opportunities is very broad and could inadvertently weaken regulatory oversight by covering technologies that pose minimal privacy or discrimination risks, such as security programs or preliminary recruitment tools like automated interview schedulers and informational chatbots. For example, an automated security program that ensures malicious bots cannot access a website's job board may inadvertently prevent a human from accessing the webpage. While the security program makes a decision that results in the loss of access to a potential employment opportunity, this is not the kind of "significant decision" that poses material discrimination or privacy risks to individuals.

Replacing "access to" with "selection for" employment would strengthen consumer protections by focusing regulatory scrutiny and compliance resources on automated systems that materially affect employment outcomes. This targeted approach ensures more effective oversight of high-stakes decisions that could potentially discriminate against job seekers, while allowing beneficial tools that facilitate the application process to remain accessible to consumers.

3. Risk Assessments

Under the proposed rules, another jurisdiction's risk assessment would be compliant in California only if it could "meet all requirements" of the CCPA, CPRA and corresponding CPPA rules.

Although California is rightfully protective of consumer privacy, several other states with similar privacy-forward regimes, including Maryland, have adopted a more adaptable approach to the interoperability of risk assessments. These states accept risk assessments from other jurisdictions that are "reasonably similar in scope and effect" to their own requirements. Colorado's rules elaborate on this standard by explaining that comparable assessments should address similar processing operations that present similar risks of harm to consumers.²

This approach allows risk assessments to be used across certain states while also ensuring that if they don't substantively meet CA's requirements, they wouldn't be permissible.

Thank you for your consideration. Please feel free to contact me if you have any questions.

Sincerely,

Kristin Malone

CPPA CPPA CPPA,

I strongly urge the CPPA to adopt its proposed regulations for businesses using automated decisionmaking technologies that would protect Californians' safety, privacy, and informed consent.

These common sense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

Please stand strong, defend our rights to algorithmic transparency and accountability, and adopt the amended regulations.

CPPA CPPA CPPA,

I strongly urge the CPPA to adopt its proposed regulations for businesses using automated decisionmaking technologies that would protect Californians' safety, privacy, and informed consent.

These common sense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

Please stand strong, defend our rights to algorithmic transparency and accountability, and adopt the amended regulations.

CPPA CPPA CPPA,

Dear Law makers,

We are at a pivotal point in history with an amazing technology becoming available. This tech needs VERY STRONG safeguards to ensure human knowledge and empathy are in full control and there is a very clear OFF button!!!! I strongly urge the CPPA to adopt its proposed regulations for businesses using automated decisionmaking technologies that would protect Californians' safety, privacy, and informed consent.

These common sense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

I strongly urge the CPPA to adopt its proposed regulations for businesses using automated decisionmaking technologies that would protect Californians' safety, privacy, and informed consent.

These common sense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

Subject: Protect Californians and Adopt the Robust Proposed Rules -- Public Comment on CCPA Updates, Cyber, Risk, ADMT, and Insurance Regulations

To the California Privacy Protection Agency Board Chair Jennifer M. Urban and Board Members:

I strongly urge the California Privacy Protection Agency (CPPA) to adopt its proposed regulations for businesses using automated decision-making technologies that would protect Californians' safety, privacy, and informed consent.

These commonsense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

Please stand strong, defend our rights to algorithmic transparency and accountability, and adopt the amended regulations.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely, Christopher Lish

I strongly urge the CPPA to adopt its proposed regulations for businesses using automated decisionmaking technologies that would protect Californians' safety, privacy, and informed consent.

These common sense rules are a vital intervention for consumer protection and human rights as unaccountable algorithms increasingly influence our housing, education, employment, and basic freedoms. These rules should reflect the needs of everyday people to be protected from discrimination and data scraping, not Big Tech's appetite for profiting from our personal info.

Please stand strong, defend our rights to algorithmic transparency and accountability, and adopt the amended regulations.
